

Clients turn to Ninyo & Moore for innovative and cost-effective solutions for their time critical and complex remediation projects, with the intent of achieving their goals, including achieving no further action (NFA) status with regulatory agencies and site development. As a leading environmental and engineering consulting firm, our personnel include highly-experienced and qualified engineers, geologists, and scientists who are respected subject matter experts for remedial testing, design, permitting, installation, operation & maintenance, and closure. Our professionals maintain positive working relationships with staff at various regulatory agencies.

Remediation technologies Ninyo & Moore has implemented under the oversight of federal, state, and local agencies include:

- Air Sparging
- Bio-Sparging
- Bioremediation
- Dual Phase High-Vacuum Extraction
- Enhanced Reductive Dechlorination
- Excavation, Transportation, and Disposal
- In-Situ Chemical Oxidation
- Pump and Treat
- Soil Vapor Extraction
- Solidification and Stabilization
- Surfactant Enhanced Aquifer Remediation
- Thermal Desorption
